

# CleverLCD

## integrated interactive LCD screen

Imagine a 65" HD ready LCD display that responds to your finger touch, bringing your presentation alive. Imagine a 52" LCD display with dynamic interactive digital signage software on display letting people choose the content they want to see. Imagine a 42" LCD display recording your meeting notes, saving and printing them to all the delegates. With the Sahara CleverLCD imagination becomes reality with the world's first integrated interactive LCD display system.

### Why integrated?

An integrated LCD display offers significant advantages over more traditional overlay solutions. Control is more precise as there is no "gap" between the glass and sensing matrix making the operation far easier. Mismatches between your finger and cursor position are minimised. The toughened 4mm glass ensures that no damage can occur or "ripple" effects appear on the LCD screen. The choice of LCD technology over plasma overcomes any potential issues of screen burn out.

### HD ready

Both the 65" and 52" offer true 1080p ready displays, for greater clarity and sharpness far above popular projection display systems. The 42" and 32" screens offer 720p lines. The high brightness and contrast ratios are ideal for use in bright sunlit rooms without loss of image quality.

### Plug and Play

Simple to install, on either wall or floor stands the CleverLCD is ready to connect to your Windows PC using its auto-sensing twin vga ports or the DVI-I digital data port. The 60,000 hour backlight life (that's nearly 7 years in a 24/7 operating environment) eliminates expensive replacement lamps, and three year on-site warranty options ensure peace of mind.

### Environment friendly

With no lamps to replace and dispose of and auto sensing data ports that switch the screen off if there is nothing to display (and switch it on again automatically too) the CleverLCD reduces your power consumption, without you having to do anything! Maintenance free, cleansing free, fanless operation – extra benefits at no extra cost.

*...The CleverLCD Touch 65-inch interactive touchscreen provides a working surface equivalent to that of a whiteboard but with no shadow, projector dazzle or ambient light issues....*

*...Control is easy and precise thanks to the integrated surround. It feels natural to use in front of an audience...*

*...It's so tough too. People have used all kinds of objects to control the screen, and it's very reassuring to know that it is virtually indestructible...*

*...Gone are the days of having to clean the projector filters, and expensive failed lamps....*
